

Foran Mining Corporation (FOM-TSX.V), a Vancouver based exploration and mining company, is seeking experienced geologists for its McIlvenna Bay project in east-central Saskatchewan. The McIlvenna Bay Zn-Cu-Au-Ag deposit is one of the largest undeveloped VMS deposits in Canada. Foran completed a pre-feasibility study for the deposit in 2020 and is planning a significant infill drill program in advance of commencing Feasibility level work on the deposit this summer.

Foran is focusing on infill drilling on the deeper parts of the deposit followed by exploration drilling on several satellite targets during the summer months. Contract Geological positions are currently available in support of planned 2021 exploration programs (currently underway). There is potential that some of these contract positions could turn into longer term employment opportunities for the right candidates.

**Senior / Project Geologist:** Two positions

This position involves overall geological and data management of ongoing exploration programs. The position involves onsite management and oversight of coreshack activities and data collection from drill programs on a rotational basis. There will also be an opportunity for collaborative input into the design and implementation of the geological, geochemical and geophysical components of upcoming programs as we continue to explore and develop satellite deposits in the area. The successful candidate will report directly to the Vice President, Exploration and will form a critical part of the Foran Mining Corporation exploration team.

**Job Responsibilities:**

- Responsible for onsite geological management of the drill program and ensuring consistency in core logging and data collection by geological and geotechnical staff, including the use of oriented coring techniques
- Implementation and oversight of Foran's established QAQC protocols to ensure clean data collection for the drill programs
- Core logging and mentoring of junior geological and on-site staff
- Compiling historic geological data and designing and implementing exploration programs utilizing modern geophysical and geochemical techniques

**Job Requirements:**

- A graduate or undergraduate degree in Geology
- 10+ years of relevant field and core logging experience
- Relevant exploration and project management experience. Previous advanced stage exploration or feasibility level work would be an asset.
- Good management skills with the ability to effectively supervise geologists, on-site personnel and contractors, as required.

# FORAN

## MINING CORPORATION

- Experience with mining and exploration software programs: MapInfo/Arcview GIS, Gemcom (or equivalent), Leapfrog, etc would be an asset.
- Database management skills and experience with drill program QA/QC components
- Familiarity with DataShed data management software would be an asset
- Exploration experience for volcanogenic massive sulphide (VMS) deposits is preferable.

This posting is for a contract position to commence immediately. A competitive salary package is available for the successful candidate with a potential opportunity for longer term employment as part of the Foran Mining Corporation exploration team.
