

Foran Mining Corporation (FOM-TSX.V), a Vancouver based exploration and mining company, is seeking an experienced and motivated Database Manager for its McIlvenna Bay project in east-central Saskatchewan. The McIlvenna Bay Zn-Cu-Au-Ag deposit is one of the largest undeveloped VHMS deposits in Canada and the world's first carbon neutral copper development project.

Foran is currently undertaking an extensive regional exploration program focused on satellite targets in proximity to the future location of a mine and processing facility at McIlvenna Bay.

Foran is committed to building a skilled and diverse workforce as we move into our next phase of growth.

Database Manager:

As a key member of Foran's Exploration team, the Geology Database Manager will be responsible for assuming a strategic role in leadership and direction of the exploration geologic database.

Based in Saskatoon, SK, with on-site work at McIlvenna Bay as required, the Database Manager will be responsible for implementation, development, auditing, QA/QC reporting and decision-making support for exploration geological databases. The successful candidate will report directly to the Exploration Manager or their designate.

Job Responsibilities:

- Design and implementation of exploration and operations databases and workflow
- QA/QC and reporting of analytical and other data sets to the senior geoscience team
- Generate and run queries, reports, and validation scripts to maintain integrity of all data
- Work with site personnel to ensure capture of relevant new and historic information to facilitate generation of geological and resource models
- Audit site data entry and data import processes to ensure timely availability of data and share best practices across the organization
- Ensure all project geologic and spatial data are consolidated and stored on the corporate data warehouse to ensure availability across the organization
- Work with senior technical specialists in functions such as geology, geostatistics, engineering, metallurgy and environment to ensure cross-functional communication within the study or project.

Job Requirements:

- A graduate or undergraduate degree in Geology
- 3-5 years of experience in exploration logging and sampling with exposure to databases and geological information collection software
- Working knowledge of geological-related QA/QC and reporting
- Understands geochemical sampling, including assay techniques, and selection and insertion of appropriate QA/QC samples and rates to comply with NI 43-101 standards

- Ability to troubleshoot complex problems involving a variety of source data

This posting is for a full-time position, based in Saskatoon, SK, to commence in October 2021. A competitive salary package is available for the successful candidate.

Foran is creating a blueprint for responsible mining that causes the least possible harm and delivers better returns from day one of operation. We aim to be cleaner, safer, and more efficient than the competition by design. We are committed to protecting the earth and communities with zero-emission technologies, environmentally friendly practices, combined with innovative worker safety and quality of life initiatives and strong transparent governance.
