

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

The following Management's Discussion and Analysis ("MD&A") is for Foran Mining Corporation's (the "Company") year ended December 31, 2014 and covers information up to the date of this MD&A as stated below.

This MD&A should be read in conjunction with the Company's consolidated financial statements and the notes thereto for the year ended December 31, 2014, which have been prepared in accordance with International Financial Reporting Standards ("IFRS").

In April of 2013, the Company changed its financial year-end from September 30 to December 31. The comparative information in the consolidated financial statements is for the fifteen-month period ending December 31, 2013.

This MD&A may contain forward-looking statements that reflect management's current expectations with regards to future events. By their nature, these statements involve risk and uncertainties, many of which are beyond the Company's control. Actual results may differ materially from those expressed in such forward-looking statements. Readers are cautioned not to place undue reliance on these statements. The Company disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

All amounts are stated in Canadian dollars unless otherwise indicated. Additional information regarding the Company, including copies of the Company's continuous disclosure materials is available through the SEDAR website at www.sedar.com or on the Company's website at www.foranmining.com.

This MD&A is dated April 14, 2015.

NATURE OF BUSINESS

The Company was originally incorporated under the laws of British Columbia on June 21, 1989, was continued into Saskatchewan on November 13, 2007 and was continued back into British Columbia on May 28, 2014. The Company is a reporting issuer in British Columbia, Alberta, Ontario, New Brunswick, Nova Scotia and Newfoundland and Labrador. The Company's common shares are traded on the TSX Venture Exchange under the symbol "FOM". The Company's principal business activity is the acquisition and exploration of mineral properties with the objective of discovering economically recoverable mineral reserves for development of an operating mine.

To date the Company has not generated any revenues.

HIGHLIGHTS AND KEY DEVELOPMENTS (to the date of this report)

- From January to April, 2015, the Company conducted a winter exploration program, with a total of 4,459 metres ("m") drilled in 11 diamond drill holes, comprised of 1,914m in five holes at the Thunder Zone on the Balsam Property and 2,545m in six holes on the Bigstone deposit on the Bigstone Property. As part of the winter program, borehole geophysics is being conducted on select drill holes and a 50 line kilometre ("line-km") large loop, ground-based, deep-penetrating time-domain electromagnetic geophysical survey ("DEEP-EM Survey") is being conducted north of the Company's 100% owned McIlvenna Bay deposit (the "Deposit") on the McIlvenna Bay Property. Results from the borehole geophysics and DEEP-EM Survey are pending;

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

HIGHLIGHTS AND KEY DEVELOPMENTS (to the date of this report) (continued)

- On April 1, 2015, the Company released the results of the first of six holes drilled on the Bigstone deposit. Highlights included 18.4% zinc ("Zn") over 11.78m and 1.4% Copper ("Cu") over 10.59m from an approximately 95m interval of massive to semi-massive, stringer and disseminated sulphides, followed further downhole by 1.3% Cu over 8.47m in BS-15-240. Results from the remaining five drill holes are pending;
- On March 25, 2015, the Company released the results of the five holes drilled at the Thunder Zone. Results from this drilling confirmed and expanded on the initial 2013 discovery. Highlights from this program included 5.0% Cu, 2.1% Zn, 0.84g/t gold ("Au") and 41g/t silver ("Ag") over 2.62m in an approximately 12m thick sulphide-rich interval in BA-15-80 and 2.0% Cu, 3.5% Zn, 0.37g/t Au and 12g/t Ag over 3.46m, followed downhole by 0.7% Cu, 7.2% Zn, 0.29g/t Au and 43 g/t Ag over 3.70m within an approximately 15m thick sulphide-rich interval in BA-15-83;
- On December 22, 2014, the Company announced the completion of a non-brokered private placement of 6,400,000 flow-through common shares at a price of \$0.25 per share for gross proceeds of \$1,600,000, which will be used to fund its exploration and development programs in 2015;
- On November 12, 2014, Foran released the results of a positive Preliminary Economic Assessment ("PEA") on the Deposit. See '*Mclvenna Bay Property*' below for additional information;
- In October 2014, the Company completed an agreement with Teck Resources Limited ("Teck") to extinguish back-in rights held by Teck on the Company's Bigstone, Balsam and Hanson properties in exchange for 1,000,000 common shares of the Company, 1,000,000 share purchase warrants, and certain future sale participation rights. In addition to adding a significant industry player to the Company's shareholder base, this transaction also simplifies any potential combined mining with the Deposit and increases financing alternatives;
- On September 24, 2014 Mr. Pierre Lassonde, a significant shareholder of the Company and on August 1, 2014 Mr. Darren Morcombe, Chairman of the Company's Board of Directors, announced that they had increased their ownership interests to 12.1% and 12.5%, respectively, of the Company's issued and outstanding common shares;
- In July 2014, the Company successfully completed a program of geological mapping, lithogeochemical sampling and historic drill core rehabilitation and logging on its four westernmost Saskatchewan properties;
- On May 1, 2014, the Company announced the results of a winter exploration program on its Mclvenna Bay and Bigstone properties in east-central Saskatchewan. Exploration activities included initial diamond drilling on a recently identified high-priority geophysical target ("Target A") that is located on the Mclvenna Bay property approximately 1.5 km southeast of the Deposit, as well as geophysical surveys on both the Mclvenna Bay and Bigstone properties;
- On February 11, 2014, the Company announced the completion of a non-brokered private placement of 6,000,000 units of the Company (the "Units") at a price of \$0.20 per Unit for gross proceeds of \$1,200,000. Each Unit consisted of one flow-through common share and one-half of one common share purchase warrant. Each whole warrant is exercisable into one common share of the Company at a price of \$0.30 per share, with expiry of August 11, 2015; and

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

HIGHLIGHTS AND KEY DEVELOPMENTS (to the date of this report) (continued)

- On January 28, 2014, the Company announced the purchase of various net profit interests from Thundermin Resources Inc. ("Thundermin") on certain of the Company's exploration properties in Saskatchewan and Manitoba in consideration for \$50,000 in cash and 100,000 common shares of the Company.

At December 31, 2014, the Company had a total of \$4.1 million in cash and cash equivalents (2013: \$4.3 million). Working capital totaled \$4.0 million (2013: \$4.3 million). For the year ended December 31, 2014, the Company recorded a net loss of \$1.5 million (fifteen-month period ended December 31, 2013: \$2.8 million).

OUTLOOK

As noted in '*Highlights and Key Developments*' above, the Company announced the results of a positive PEA on the Deposit in November 2014. Based on the encouraging results of the PEA, management believes the Deposit should be advanced to the level of a Feasibility Study and consequently, management is pursuing opportunities to do so. In April 2015, the Company completed a successful winter 2015 exploration program including a drill program of 4,459m on certain of its properties in east-central Saskatchewan.

Management's long-term strategy is to develop and build a new base metal mining camp in the Flin Flon region. It plans to realize this strategy by continuing to advance the Deposit, while simultaneously advancing new discoveries and historic resources in order to delineate nearby satellite deposits, with the objective of creating a combined economic model for the camp as a whole.

Management is contemplating various strategies to secure the capital required to finance both a Feasibility Study for McIlvenna Bay and the construction of a mine at McIlvenna Bay.

QUALIFIED PERSON

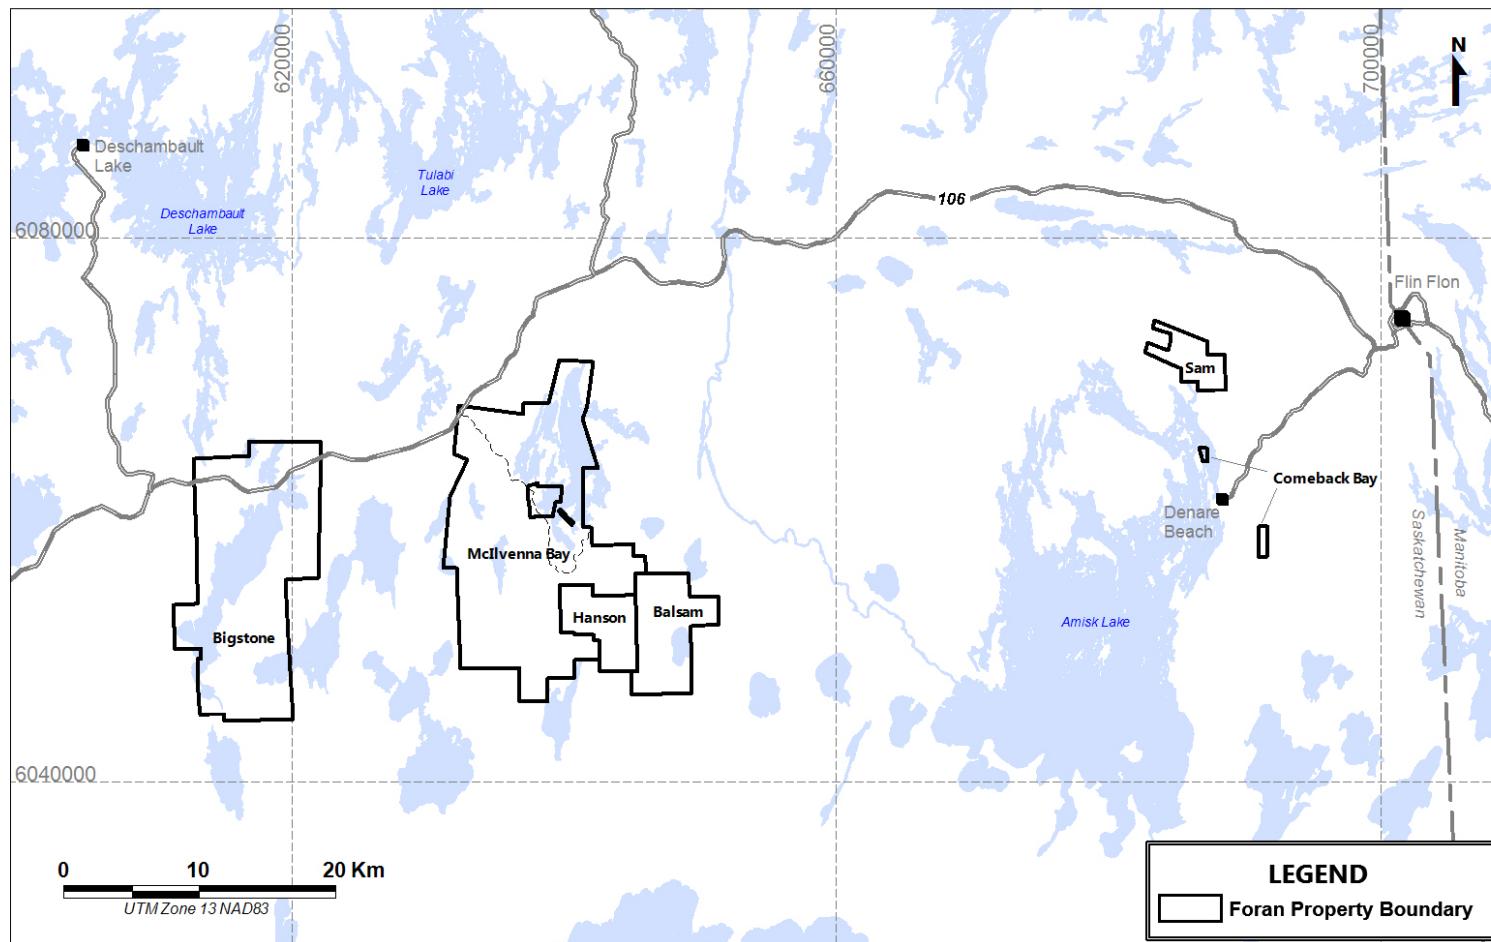

Mr. Roger March, P.Geo., VP Project Exploration for the Company and a Qualified Person within the meaning of National Instrument ("NI") 43-101, has reviewed the technical information in this MD&A.

MINERAL PROPERTIES

SASKATCHEWAN PROPERTIES

As of the date of this report, the Company has six properties in Saskatchewan comprising a total of 59 claims for 44,969 hectares ("ha"), located between 12 and 90 kilometres ("km") west of Flin Flon, Manitoba. The four westernmost properties are higher priority, consisting of the flagship McIlvenna Bay property which contains the Deposit, two contiguous properties (Hanson and Balsam) and one non-contiguous property (Bigstone) which occur at the western limit of the Flin Flon Greenstone Belt. All four properties are underlain by prospective felsic volcanic stratigraphy that hosts variably significant Volcanogenic Massive Sulphide ("VMS") styles of alteration and mineralization. The two easternmost properties in Saskatchewan (Sam and Comeback Bay) are of lower priority having both precious and base metal VMS potential within the western limit of the Flin Flon Arc Assemblage (Birch Lake Belt).

**MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE YEAR ENDED DECEMBER 31, 2014**

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

MINERAL PROPERTIES (continued)

SASKATCHEWAN PROPERTIES (continued)

1) MCILVENNA BAY PROPERTY

The Company has a 100% interest in the McIlvenna Bay Property in east central Saskatchewan. The McIlvenna Bay Property consists of 30 claims covering a total of 20,382 ha. The Deposit is located on the McIlvenna Bay Property, approximately one km south of Hanson Lake, Saskatchewan, 375 km northeast of Saskatoon, Saskatchewan and 65 km west south-west of Flin Flon, Manitoba.

Some of the claims that make up the McIlvenna Bay Property are subject to a Net Tonnage Royalty of \$0.75 per tonne of ore extracted, with a right of first refusal in favor of the Company.

Cameco Corporation ("Cameco") and BHP Billiton ("Billiton") collectively hold a 1% Net Smelter Return ("NSR") royalty interest on McIlvenna Bay, which can be purchased by the Company at any time for \$1,000,000.

The Deposit was discovered in 1988 and includes two distinct styles of mineralization which include massive to semi-massive sulphides and copper stockwork. In November 2014, the Company announced the results of a positive PEA on the Deposit. The PEA was completed by JDS Energy & Mining Inc. ("JDS") and the results and inputs to this study are summarized below.

Deposit PEA

The PEA on the Deposit yielded an estimated pre-tax net present value with a seven percent discount rate ("NPV_{7%}") of \$381.7 million, with a 21.9% internal rate of return ("IRR") and a 4.1 year payback; post-tax NPV_{7%} is \$262.6 million, with a 18.9% IRR and a 4.1 year payback.

The PEA envisions an average throughput rate of 5,000 tonnes per day ("tpd") as a conventional underground operation through longhole stoping and cemented paste backfill. The mine is expected to have a 14 year life, with potential to extend the life of operations through resource expansion at depth or delineation of nearby satellite deposits. A stand-alone concentrator is proposed to be constructed adjacent to the McIlvenna Bay mine.

Total payable life of mine ("LOM") production is expected to be 804.7 million pounds ("Mlbs.") of zinc, 513.7 Mlbs. of copper, 15.8 Mlbs. of lead, 218,000 ounces of gold and 5.44 million ounces of silver.

Pre-production capital cost ("CapEx") is estimated at \$207.3 million, with a \$41.5 million contingency, for a total of \$248.8 million. Sustaining capital is estimated at \$125.2 million, with a \$25.0 million contingency, for a total of \$150.3 million. The total estimated capital cost over the LOM including closure costs net of salvage value is estimated at \$332.5 million, with a \$66.5 million contingency, for a total of \$399.1 million. The majority of mine construction is expected to take 18 months, with underground mine development adding an additional 6 months to the build-out period.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

1) MCILVENNA BAY PROPERTY (continued)

Deposit PEA (continued)

Summary of Key Parameters

Parameter	
	13.7 years
Plant Throughput (LOM average)	4,761 tpd
Revenue	\$2,504.9 million LOM
Operating Costs	\$1,211.3 million LOM \$51.03/tonne milled
Net Pre-tax Cash Flow	\$894.6 million LOM \$65.5 million /year
Net After-tax Cash Flow	\$646.2 million LOM \$47.3 million /year
Cash Cost (Net of By-Product) ¹	
Cu	US\$0.84/lb.
Zn	(US\$0.37/lb.)
Pre-Tax NPV _{7%}	\$381.7 million
Pre-Tax IRR	21.9%
Pre-Tax Payback	4.1 years
After-Tax NPV _{7%}	\$262.6 million
After-Tax IRR	18.9%
After-Tax Payback	4.1 years

¹ Includes all Treatment & Refining charges, transportation charges, deductions, operating costs and royalties.

The average on-site operating costs ("OpEx") total \$51.03 per tonne processed, which is comprised of \$33.54 per tonne for mining, \$13.39 per tonne for milling and \$4.10 per tonne for general and administrative ("G&A"). OpEx estimates for the Deposit were prepared incorporating both off-site and on-site infrastructure as related to the mine plan and process schedule.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

1) MCILVENNA BAY PROPERTY (continued)

***Deposit PEA* (continued)**

The base case metal price deck and exchange rate are based on spot prices as at October 15, 2014 and are US\$3.08/lb for copper, US\$1.06/lb for zinc, US\$0.93/lb for lead, US\$1,238/oz. for gold, and US\$17.00/oz. for silver, with a CDN\$/US\$ exchange rate of 0.89.

Summary of Capital Expenditures

	Base (million)	Contingency (20%) (million)	Total (million)
Pre-Production CapEx	\$207.3	\$41.5	\$248.8
Sustaining Capital	\$125.2	\$25.0	\$150.3
LOM	\$332.5	\$66.5	\$399.1

Breakdown of Operating Costs

Average Operating Costs	Per tonne milled	LOM
Mining	\$33.54	\$796.2M
Processing	\$13.39	\$317.7M
G&A	\$4.10	\$97.4M
Total	\$51.03	\$1,211.3M

Summary of Payable Metal Production

Metal	Per annum		LOM	
	(Mlbs.)	tonnes	(Mlbs.)	tonnes
Zinc	58.9	26,717	804.7	365,101
Copper	37.6	17,055	513.7	233,013
Lead	1.2	544	15.8	7,167
	OZ.		OZ.	
Gold	16,000		218,000	
Silver	398,000		5,437,000	

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

1) MCILVENNA BAY PROPERTY (continued)

***Deposit PEA* (continued)**

All input estimates are based on budget quotations, peer comparisons and JDS' recent experience in projects of similar scope.

Infrastructure

The Deposit is linked to Flin Flon, Manitoba by 85 km of highway followed by 18 km of unsealed secondary road.

A power line currently crosses the property in the vicinity of the Deposit. It is anticipated that this line would require upgrading to support a 25 megawatt load required to operate mine operations and a concentrator.

It is envisaged that concentrate would be trucked weekly from the minesite and that no long-term storage facility would be required on-site.

Mining & Processing

The PEA is based on a conventional underground mine similar to existing mining operations in the region, with a ramp and shaft to optimize resource extraction. Zinc and copper concentrates are not assumed to be transported to the nearest smelters, but to a North American smelter for zinc and an Asian smelter for copper.

Due to the broad horizontal thickness and steep dip of the mineralized zones, the mine will utilize longhole stoping. Structural backfill in the form of cemented paste fill will be pumped underground from a surface paste facility to fill 73% of the open stope voids, while the remaining 27% will be filled with run of mine waste as it is produced. A concentrator with conventional milling and flotation is envisaged to be built on-site.

The PEA contemplates a 5,000 tpd process plant flow sheet design which follows conventional crushing, a semi-autogenous mill with a pebble crushing circuit, a ball mill grinding circuit using cyclones for classification followed by a talc pre-flotation step to remove detrimental talc prior to copper/zinc/bulk flotation. The metallurgical processing selected for the different mineralization types were designed to produce copper concentrates, zinc concentrates and/or a bulk concentrate as final products depending on the mineralization type batch fed to the plant. Details on the various mineralization types are provided below.

The PEA utilized the results of metallurgical testwork conducted in 2012 on the three main styles of mineralization at the Deposit, namely the Main Lens Upper West Zone massive to semi-massive sulphides, the Main Lens Zone 2 massive sulphides, and the Copper Stockwork Zone, to determine metallurgical recoveries for the Deposit. This work indicated the Deposit would produce marketable copper, zinc and lead-copper concentrates, with the copper and zinc concentrates being characterized by low to very low levels of deleterious elements and good copper and zinc grades, respectively.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

1) MCILVENNA BAY PROPERTY (continued)

Deposit PEA (continued)

Mineral Resource Estimate

In March 2013, Foran updated the mineral resource estimate for the Deposit (the “**2013 Resource**”). The PEA incorporates the results from the 2013 Resource, of which 55% was classified as indicated and 45% was classified as inferred.

Mineral Resource Estimate (US\$60/t NSR cut-off)¹⁻⁴

Zone	Tonnage (kt)	Copper (%)	Zinc (%)	Gold (g/t)	Silver (g/t)	CuEq (%)	ZnEq (%)
Indicated							
Main Lens - Upper West Zone	2,148	1.66	4.10	0.88	31	2.79	18.75
Main Lens - Zone 2	3,386	0.31	7.15	0.24	24	1.51	10.19
Lens 3	756	1.23	2.55	0.30	15	1.79	12.03
Copper Stockwork Zone	7,610	1.60	0.30	0.50	11	1.90	13.10
Total Indicated	13,900	1.28	2.67	0.49	17	1.96	13.19
Inferred							
Main Lens - Upper West Zone	2,913	1.63	3.68	0.51	19	2.47	16.62
Main Lens - Zone 2	2,796	0.51	7.13	0.38	26	1.79	12.04
Lens 3	124	1.61	2.67	0.51	18	2.31	15.52
Copper Stockwork Zone	5,478	1.56	0.47	0.42	12	1.87	12.59
Total Inferred	11,311	1.32	2.97	0.43	17	2.01	13.52

¹ Effective date January 1, 2013; CIM definitions were followed for Mineral Resources; CuEq = copper equivalent; ZnEq = zinc equivalent; NSR = Net Smelter Return.

² The base case mineral resource is estimated based on 178 diamond drill holes and a NSR cut-off grade of US\$60/t. NSR grades were calculated and high grade caps were applied as per the discussion in the Foran news release dated March 27, 2013 and include provisions for metallurgical recovery and estimates of current shipping terms and smelter rates for similar concentrates. Metal prices used are US\$3.25/lb. Cu, US\$1.10/lb. Zn, US\$1,400/oz. Au, and US\$25/oz. Ag. Specific gravity was interpolated for each block based on measurements taken from core specimens.

³ Mr. David Rennie, P.Eng., of Roscoe Postle Associates Inc. (“RPA”), prepared this mineral resource estimate. Mr. Rennie is independent of Foran and is a “Qualified Person” within the meaning of NI 43-101.

⁴ CuEq and ZnEq values were estimated based on \$53.94 per % Cu, \$8.11 per % Zn, \$31.16 per g/t Au and \$0.03 per g/t Ag.

Potentially Mineable Resources

Within the scope of the PEA, JDS re-interpreted the potentially economically viable portion of the resource through mine planning exercises and a recalculation of the NSR formulas. The diluted potentially mineable tonnes JDS has identified meets the mine planning criteria and utilizes a NSR cut-off of US\$65/tonne.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

SASKATCHEWAN PROPERTIES (continued)

1) MCILVENNA BAY PROPERTY (continued)

Other Activities

Since 2011, the Company has been working to advance the Deposit through continued exploration, resource definition and environmental and engineering studies.

Canada North Environmental Services L.P. ("CanNorth") was commissioned to complete an Environmental Baseline Study for the Deposit. Field work for this study was conducted in 2012 and a final report was received from CanNorth in November 2013. The Company also engaged ASKI Resource Management and Environmental Services Inc. ("ASKI") to conduct a Traditional Land Use study for the McIlvenna Bay project area. Within the scope of the study, ASKI personnel conducted interviews with Elders, as well as members of the Deschambault Lake and Denare Beach communities involved in hunting, fishing, trapping and harvesting in the area with respect to potential mine development of the Deposit. A final report on the results of the study was received from ASKI in December 2012 which documented that no comments indicating opposition to the project was received during the course of the study.

The Company engaged Golder Associates Ltd. to conduct various engineering studies. This work included geotechnical data collection on the Deposit, initial hydrogeological studies, waste rock geochemical characterization studies and a preliminary mine waste management study designed to identify prospective tailings storage areas in the local project area. Final reports on the preliminary design criteria for both potential underground and open pit development, the results of the geochemical studies and the preliminary mine waste management study were received in late 2013.

The Company continues to conduct exploration activities directed towards identifying additional resources in and around the Deposit. In February 2013, the Company conducted a DEEP-EM Survey on two grids on the Company's McIlvenna Bay, Balsam and Hanson properties, in proximity to the Deposit. Approximately 98 line-km was surveyed including 60.65 line-km on the McIlvenna Bay Grid and 37.45 line-km on the Balsam Grid.

During the summer of 2013, a surface exploration program was completed in the Hanson Lake area. The sampling program was conducted as part of a M.Sc. thesis designed to characterize the lithogeochemistry of the Hanson Lake area and is being conducted by a student from a Canadian university.

In October 2013, the Company received a final report on the DEEP-EM Survey conducted in 2013. This DEEP-EM survey identified two high-priority targets, Target A on the McIlvenna Bay Property and Target B on the Balsam Property. For additional information see the Company's news releases dated October 31, 2013, May 1, 2014 and March 25, 2015 and the Balsam Property section below.

From February to April 2014, the Company completed a winter exploration program on the McIlvenna Bay property to follow up on the results of the 2013 DEEP-EM Survey. Exploration activities included 17.1 line-km of detailed large loop time-domain electromagnetic ("TDEM") surveying over Target A to refine the conductors prior to testing the target with diamond drilling.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

SASKATCHEWAN PROPERTIES (continued)

1) MCILVENNA BAY PROPERTY (continued)

***Other Activities* (continued)**

A total of 1,894m in two holes were drilled on Target A. The first hole was abandoned at 211m due to excessive flattening. The second hole was drilled to a depth of 1,683m. A felsic fragmental unit with chlorite-pyrrhotite and a quartz feldspar porphyry ("QFP") body was encountered at the target depth of the main conductor. The QFP unit is interpreted to have cut the volcanics and displaced the conductive source at this location. Minor base metal sulphides were observed however no significant assay values were returned.

Preliminary modelling of the borehole electromagnetic ("EM") survey data indicates a strong off-hole conductor below the trace of the drill hole at approximately 1,200m downhole. This is interpreted to be the source of the principal Target A conductor. Although the Company's initial test hole did not intersect massive sulphides, Target A remains a high-priority target for further drill-testing.

Summer 2014 Work Program

In the summer of 2014, the Company conducted a surface exploration program on its McIlvenna Bay, Balsam and Hanson properties. The primary objectives of this program were to better define the stratigraphy most prospective for VMS mineralization north and south of the Deposit and to identify local hydrothermal alteration zones associated with VMS mineralization. This work was conducted as part of a M.Sc. thesis being completed by a student from a Canadian university and built on the work conducted in 2013. The thesis is designed to characterize the lithogeochemistry of the Hanson Lake area and is being sponsored principally by the Company and the Saskatchewan Ministry of Economy.

Winter 2015 Work Program

The Company conducted a winter exploration program on its Hanson Lake area properties from January to April 2015. See below for information on drilling and geophysics on the Bigstone and Balsam properties. On the McIlvenna Bay Property, a 50 line-km DEEP-EM Survey was conducted north of the Deposit.

Results of the DEEP-EM Survey are pending.

Neighbouring Quarry Dispositions

A sand quarry is located immediately northeast of the Deposit. A portion of the quarry leases are located in proximity to and overlie a portion of the east-central part of the Deposit. In December 2014, the Company purchased five of these quarry leases from the operator in consideration for US\$140,000, effectively obtaining control of the quarry leases that overlie the Deposit.

Fiscal 2015 Expenditure Requirements

There are no expenditures required in fiscal 2015 to keep the McIlvenna Bay property in good standing.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

SASKATCHEWAN PROPERTIES (continued)

2) BIGSTONE

The Company has a 100% interest in the Bigstone property, which is comprised of 13 claims totalling 16,117 ha oriented north-south to cover roughly 20km of prospective volcanic stratigraphy. The property hosts the Bigstone deposit with an historic mineral resource estimate prepared by past operators in 1990 of 3.75 million tonnes grading 2.03% Cu and 0.33 g/t Au in the Copper Zone using a 1% Cu cut-off and 0.53 million tonnes grading 9.62% Zn and 15.9 g/t Ag in the Zinc Zone using a 5% Zn cut-off. A sensitivity analysis was completed for the historic mineral resource estimate using cut-off grades from 1.0% to 2.5% for the Copper Zone and 2.0% to 5.0% for the Zinc Zone, which is presented below. The Company is not treating the historic estimates as current as a Qualified Person within the meaning of NI 43-101 has not completed sufficient work to classify the historic estimate as current; additional work, including re-surveying, re-logging and drill core QA/QC would be required to verify and upgrade the historic estimate to current.

Bigstone deposit Copper Zone historic resource estimate sensitivity analysis¹.

Cu cut-off (%Cu)	Tonnage	Cu (%)	Zn (%)	Au (g/t)	Ag (g/t)

¹ Foran is not treating the historic estimate as current; a Qualified Person within the meaning of National Instrument 43-101 has not completed sufficient work to classify the historic estimate as current; additional work, including re-surveying, re-logging and drill core QA/QC would be required to verify and upgrade the historic estimate to current.

Until October 2014, the Bigstone property was subject to a back-in right to Teck. In October 2014, the Company completed an agreement with Teck whereby certain back-in rights held by Teck on the Company's Bigstone, Balsam and Hanson properties were extinguished in exchange for 1,000,000 shares of the Company, 1,000,000 share purchase warrants, and certain future sale participation rights. Each warrant is exercisable into one common share of the Company at a price of \$0.24 per share with an expiry of October 14, 2016.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

SASKATCHEWAN PROPERTIES (continued)

2) BIGSTONE (continued)

In the event that the Company sells or options any of the Properties prior to September 30, 2018 (a "**Future Sale**"), the Company will pay Teck in-kind an amount equal to 20% of the proceeds from any Future Sale occurring prior to September 30, 2016 and 10% of the proceeds from any Future Sale occurring after September 30, 2016 but prior to September 30, 2018.

Some of the claims that make up the Bigstone property are subject to a 2% NSR royalty.

Winter 2014 Work Program

In April 2014 the Company completed 45 line-km of TDEM surveying over and along strike from the Bigstone historic mineral resource using an HT Squid B-field sensor. Preliminary interpretation of the survey results indicate the historic massive sulphide zinc resource is effectively defined by the TDEM. Detailed modelling of the survey data will be conducted to delineate targets for drill-testing.

Winter 2015 Work Program

In March and April 2015, the Company completed 2,545m of drilling in six large-diameter (HQ) drill holes in the Bigstone deposit. Objectives for this program include infill drilling of the Bigstone deposit, validation of historic assay results and collection of sufficient material for preliminary metallurgical testwork.

On April 1, 2015, the Company released the results of the first drill hole; highlights from this hole (BS-15-240) included 18.4% Zn over 11.78m and 1.4% Cu over 10.59m from an approximately 95m interval of massive to semi-massive, stringer and disseminated sulphides, followed further downhole by 1.3% Cu over 8.47m.

Results from the remaining five drill holes are pending.

The Company also completed borehole EM surveys on select holes from this program.

Fiscal 2015 Expenditure Requirements

As a result of the 2015 work program, all claims comprising the Bigstone property will be in good standing through 2017.

3) BALSAM

The Company has a 100% interest in the Balsam property, which is comprised of seven claims totalling 4,066 ha contiguous with the McIlvenna Bay property. Balsam claims cover the southeast strike extension of McIlvenna Bay stratigraphy and host a number of significant VMS occurrences including recently discovered high-grade copper mineralization in the Thunder Zone, as well as the Balsam Zone, where an historic mineral resource estimate has been outlined¹. Further drilling, sampling and geological interpretation will be required to upgrade the historic resource to current.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

SASKATCHEWAN PROPERTIES (continued)

3) BALSAM (continued)

Until October 2014, the Balsam property was subject to a back-in right to Teck (see 'Bigstone' above).

Some of the claims that make up the Balsam property are subject to a 2% NSR royalty.

Winter 2013 Work Program

The DEEP-EM Survey described above also covered parts of the Balsam property. The survey outlined several prospective target areas, including Target B on the Balsam property. As described below and in the Company's news release dated April 8, 2013, Target B was drill-tested in 2013 and encountered high-grade copper mineralization in the Thunder Zone (see below).

In October 2013, the Company received a final report on the winter 2013 DEEP-EM Survey. For additional information see the Company's news release dated October 31, 2013.

From January to March, 2013, the Company conducted a regional drill program, which ran concurrently with the DEEP-EM Survey. The drill program, which was completed on time and under budget, totaled 4,163m in 11 drill holes, including 3,211m in nine holes on the Balsam property. An initial drill-test of Target B resulted in the discovery of high-grade copper mineralization in the Thunder Zone, where drillhole BA-13-77 returned 4.1% Cu, 0.43 g/t Au and 27.0 g/t Ag over 3.66m, including 10.6% Cu, 0.70 g/t Au and 62.5 g/t Ag over 1.10m.

The Thunder Zone contains VMS mineralization in volcanic stratigraphy similar to the Deposit and lies approximately 7km southeast of the Deposit.

Summer 2014 Work Program

As part of its summer 2014 work program, the Company collected samples from historic drill hole BA-08 to be used in its continued lithogeochemical investigation of Balsam drill core.

Winter 2015 Work Program

From January to February 2015, the Company completed 1,914m of drilling in five holes in the Thunder Zone. On March 25, 2015, the Company released the results of all five holes, which confirmed and expanded on the original 2013 discovery.

Highlights from this program included 5.0% Cu, 2.1% Zn, 0.84g/t Au and 41g/t Ag over 2.62m in an approximately 12m thick sulphide-rich interval in BA-15-80 & 2.0% Cu, 3.5% Zn, 0.37g/t Au and 12g/t Ag over 3.46m, followed downhole by 0.7% Cu, 7.2% Zn, 0.29g/t Au and 43 g/t Ag over 3.70m within an approximately 15m thick sulphide-rich interval in BA-15-83.

The Company also completed borehole EM surveys on select holes from this program.

Further drilling of the Thunder Zone is required to determine the extent of this deposit and management is currently evaluating next steps for follow-up work.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

SASKATCHEWAN PROPERTIES (continued)

3) BALSAM (continued)

Fiscal 2015 Expenditure Requirements

There are no expenditures required in fiscal 2015 to keep the Balsam claims in good standing.

4) HANSON

The Company has a 100% interest in the Hanson property, which is comprised of two claims totalling 2,565 ha contiguous with the McIlvenna Bay property to the north and west and the Balsam property to the east. A number of VMS targets are known from past exploration.

Until October 2014, the Hanson property was subject to a back-in right to Teck (see 'Bigstone' above).

Winter 2013 Work Program

The DEEP-EM Survey which also covered parts of the Hanson property was completed in March 2013 and the results outlined several prospective target areas.

In October 2013, the Company received a final report on the DEEP-EM Survey which identified two high-priority targets, one on McIlvenna Bay and one on the Balsam property. For additional information see the Company's news release dated October 31, 2013.

Fiscal 2015 Expenditure Requirements

There are no expenditures required in fiscal 2015 to keep the Hanson claims in good standing.

5) SAM

The Company has a 100% interest in the Sam property, which is comprised of four contiguous claims totalling 1,529 ha, located 12 km west of Flin Flon. Historic exploration at the Sam property has identified shear-zone hosted Au potential in addition to limited VMS-type copper mineralization.

The Sam property is subject to a back-in right to Teck and some of the claims that make up the property are subject to a 2% NSR royalty.

Fiscal 2015 Expenditure Requirements

In order to keep the Sam claims in good standing, the minimum required expenditure in fiscal 2015 will be \$28,750.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

SASKATCHEWAN PROPERTIES (continued)

6) COMEBACK BAY

The Comeback Bay property is comprised of three claims totalling 310 ha which is located 15 km southwest of Flin Flon. The claims are underlain by felsic volcanic stratigraphy prospective for VMS mineralization.

Two of the three Comeback Bay claims are subject to a joint venture agreement in which the Company owns a 65% interest with Coronation Mines Ltd. (a subsidiary of Formation Metals Ltd.) owning the remaining 35%. These claims are subject to a 2.5% NSR royalty and a 10% NPI. The Company has a 100% interest in the other Comeback Bay claim with no encumbrances.

Fiscal 2015 Expenditure Requirements

In order to keep the Comeback Bay claims in good standing, the minimum required expenditure in fiscal 2015 will be \$6,210.

MANITOBA PROPERTIES

1) REED LAKE

The Company has a 100% interest in the Reed Lake property, which is comprised of a single claim totaling 195 ha located 105 km east of Flin Flon and 21 km southwest of Snow Lake.

Reed Lake is subject to a 1% NSR royalty. Geologically, the claim occurs within the Snow Lake arc assemblage at the eastern limit of the Flin Flon Greenstone Belt. Historic drilling has intersected altered and weakly mineralized felsic to intermediate volcanics equivalent to those hosting the HudBay Minerals Inc.'s Lalor deposit, situated 15 km to the northeast.

Fiscal 2015 Expenditure Requirements

There are no expenditures required in fiscal 2015 to keep the Reed Lake claims in good standing.

OVERALL PERFORMANCE

FINANCIAL CONDITION

The net assets of the Company increased from \$26,419,552 at December 31, 2013 to \$28,323,647 at December 31, 2014, an increase of \$1,904,095. The most significant assets at December 31, 2014 were exploration and evaluation assets of \$23,502,998 (December 31, 2013: \$21,267,558) and cash and cash equivalents of \$4,050,482 (December 31, 2013: \$4,276,480).

The majority of the increase in exploration and evaluation assets of \$2,235,440 was a result of the Company capitalizing \$554,689 of acquisition costs, \$53,297 of license and staking fees and \$1,627,319 of exploration costs on its McIlvenna Bay property and other Saskatchewan properties. The most significant exploration costs included administration and overhead costs of \$375,778, consulting costs of \$322,084 and drilling and analysis of \$313,917.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

FINANCIAL CONDITION (continued)

Acquisition costs included an amount of \$322,581 pursuant to the purchase of certain back-in rights from Teck in October 2014, an amount of \$164,108 pursuant to the purchase of five quarry leases from a neighbouring quarry operator in December 2014 and an amount of \$68,000 pursuant to the purchase of various net profit interests from Thundermin on certain of the Company's properties in Saskatchewan and Manitoba in February 2014. The \$322,581 for the purchase of the back-in rights was the fair value of 1,000,000 common shares and 1,000,000 share purchase warrants issued to Teck, the \$164,108 was the Canadian equivalent of US\$140,000 paid to the quarry operator and the \$68,000 consisted of the Company paying Thundermin \$50,000 in cash and issuing 100,000 common shares of the Company valued at \$18,000 to Thundermin.

RESULTS OF OPERATIONS

Year ended December 31, 2014

The Company recorded a net loss of \$1,464,682 for the year ended December 31, 2014 (fifteen months ended December 31, 2013: \$2,799,339). Expenses before other items were \$1,524,003 (2013: \$2,360,225) with the most significant being salaries and benefits of \$565,443 (2013: \$928,927), share-based payments expense of \$232,998 (2013: \$547,775), investor relation costs of \$223,022 (2013: \$206,656) and office and administration costs of \$195,145 (2013: \$308,957). The most significant other item for the year ended December 31, 2014 was interest income of \$47,863 (2013: \$98,444). For the fifteen months ended December 31, 2013, other items also included an impairment of investments of \$551,816, a flow-through share premium reversal of \$145,093 and a write-off of exploration and evaluation assets of \$86,297.

The decrease of \$363,484 in salaries and benefits was a result of, the Company having to downsize its head office staff in Q3, 2013, the Company's remaining staff working reduced work weeks and the Company paying out a total of \$120,000 in bonuses to the Company's executive officers during the fifteen months ended December 31, 2013 (year ended December 31, 2014: \$37,143).

The Company applies the fair value method of accounting for all awards of stock options by using the Black-Scholes Option Pricing Model. The decrease of \$314,777 in share-based payments expense for the year ended December 31, 2014 was based on a number of factors including, but not limited to, the occurrence of grants during a particular period, the Company's share price at the time of an option grant and the timing of recording share-based payments expense based on vesting schedules.

The flow-through share premium reversal of \$145,093 for the fifteen months ended December 31, 2013 related to the Company's August 2012 flow-through financing. Under IFRS, on issuance, the Company allocates the flow-through share into i) share capital, and ii) a flow-through share premium, equal to the estimated premium if any, investors pay for the flow-through feature, which is recognized as a liability called flow-through share premium liability. Upon incurring qualifying exploration expenditures, the Company derecognizes the liability and recognizes a flow-through share premium reversal in income for the amount of tax reduction renounced to the shareholders.

The impairment of investments of \$551,816 for the fifteen months ended December 31, 2013 was a transfer from accumulated other comprehensive loss pursuant to an other-than-temporary impairment write-down of the Company's investments.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

CASH FLOWS

Year ended December 31, 2014

Cash and cash equivalents decreased by \$225,998 during the year ended December 31, 2014, from \$4,276,480 at December 31, 2013 to \$4,050,482. The decrease was a result of cash of \$1,777,415 used in investing activities, cash of \$1,089,138 used in operating activities, partially offset by cash of \$2,640,555 provided by financing activities.

The majority of cash used in investing activities consisted of exploration and evaluation asset expenditures of \$1,587,285, \$164,108 for the purchase of the quarry leases and \$50,000 for the purchase of net profit interests from Thundermin. The cash used in operating activities consisted of a net loss of \$1,464,682, non-cash items of \$353,379 and a net change in non-cash working capital items of \$22,165. This was partially offset by the receipt of net proceeds of \$2,640,555 pursuant to the Company completing two private placements during the year ended December 31, 2014. The Company issued 6,000,000 units in February 2014 at a price of \$0.20 per unit and 6,400,000 flow-through shares in December 2014 at a price of \$0.25 per share.

SELECTED ANNUAL INFORMATION

The following table provides information for the following periods:

	Year ended December 31, 2014	Fifteen month period ended December 31, 2013	Year ended September 30, 2012
	\$	\$	\$
Income and other items	59,321	53,906	99,199
Expenses	(1,524,003)	(2,360,225)	(2,420,972)
Flow-through share premium reversal	-	145,093	912,044
Impairment of investments	-	(551,816)	-
Write-off of exploration and evaluation assets	-	(86,297)	-
Net loss for the period	<u>(1,464,682)</u>	<u>(2,799,339)</u>	<u>(1,409,729)</u>
Basic and diluted loss per share	<u>(0.02)</u>	<u>(0.04)</u>	<u>(0.02)</u>
Total assets	28,467,756	26,526,020	28,625,697
Total long-term financial liabilities	-	-	-
Cash dividends declared	-	-	-

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

SELECTED ANNUAL INFORMATION (continued)

In 2014, the majority of income and other items consisted of interest income of \$47,863 (2013: \$98,444, 2012: \$84,199).

The majority of expenses in 2014 consisted of salaries and benefits of \$565,443 (2013: \$928,927, 2012: \$698,697) and share-based payments expense of \$232,998 (2013: \$547,775, 2012: \$843,094).

The flow-through share premium reversal in 2013 and 2012 was a result of the Company incurring qualifying exploration expenditures related to flow-through financings that were completed in March 2011 and August 2012.

During the fifteen months ended December 31, 2013, the Company's investments incurred a decline that was considered "other-than-temporary". Consequently, an amount of \$551,816 was transferred from accumulated other comprehensive loss and was recognized in net loss for the period.

Total assets increased by \$1,941,736 mostly as a result of the Company capitalizing \$2,235,440 of exploration and evaluation acquisition and exploration expenditures during the year ended December 31, 2014.

SUMMARY OF QUARTERLY RESULTS

	Q4, 2014	Q3, 2014	Q2, 2014	Q1, 2014
	\$	\$	\$	\$
Net loss for the period	(399,101)	(313,209)	(361,367)	(391,005)
Basic and diluted loss per share	(0.00)	(0.00)	(0.00)	(0.00)

	Q5, 2013	¹ Q4, 2013	Q3, 2013	Q2, 2013
	\$	\$	\$	\$
Net loss for the period before flow-through share premium reversal	(918,099)	(419,972)	(396,432)	(743,790)
Flow-through share premium reversal	-	-	-	100,711
Net loss for the period	(918,099)	(419,972)	(396,432)	(643,079)

Basic and diluted loss per share	(0.01)	(0.01)	(0.01)	(0.01)
----------------------------------	--------	--------	--------	--------

¹In April 2013 the Company changed its financial year-end from September 30 to December 31 and consequently fiscal 2013 had five quarters as noted in the table above.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

SUMMARY OF QUARTERLY RESULTS (continued)

Over the last eight quarters, the Company's net loss has ranged from \$313,209 in Q3, 2014 to \$918,099 in Q5, 2013. \$551,816 of the loss in Q5, 2013 was a result of an "other-than-temporary" decline in the Company's investments.

See "*Results of Operations*" above for the explanation of the flow-through share premium reversal that was recorded in Q2, 2013.

The following table provides a breakdown of the expenses that contributed to the quarterly net losses:

	Q4, 2014	Q3, 2014	Q2, 2014	Q1, 2014
Share-based payments expense	\$ 31,290	\$ 45,702	\$ 42,077	\$ 113,929
Salaries and benefits	161,711	118,516	148,386	136,830
Other expenses	203,449	160,201	199,648	162,264
Total expenses for the period	<u>396,450</u>	<u>324,419</u>	<u>390,111</u>	<u>413,023</u>
	Q5, 2013	Q4, 2013	Q3, 2013	Q2, 2013
Share-based payments expense	\$ 63,627	\$ 62,712	\$ 67,168	\$ 213,749
Salaries and benefits	124,256	146,261	175,036	303,163
Other expenses	147,879	140,091	179,595	244,026
Total expenses for the period	<u>335,762</u>	<u>349,064</u>	<u>421,799</u>	<u>760,938</u>

Share-based payments expense and salaries and benefits comprised a significant portion of the expenses which contributed to the net loss for each of the quarters from Q2, 2013 to Q4, 2014.

The share-based payments expense was the fair value of the stock options and warrants that vested in each respective quarter.

Salaries and benefits in Q4, 2014 and Q2, 2013 included bonuses of \$37,143 and \$120,000, respectively, which were approved by the Company's Board of Directors and paid out to the Company's executive officers. Salaries and benefits from Q4, 2013 to Q4, 2014 were the lowest in all eight quarters as a result of the Company implementing cost cutting measures as a result of adverse market conditions.

Other expenses included items such as amortization, investor relations costs, office and administration, professional fees and travel and accommodation.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

LIQUIDITY AND CAPITAL RESOURCES

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company has in place a planning and budgeting process to determine the funds required to support the Company's operating requirements as well as its planned capital expenditures. The Company manages its financial resources to ensure that there is sufficient working capital to fund near term planned exploration work and operating expenditures. The Company has considerable discretion to reduce or increase plans or budgets depending on current or projected liquidity. When appropriate, the Company will seek joint venture partners in order to fund or share the funding of its exploration properties to minimize shareholder risk.

The Company does not currently own or have an interest in any producing mineral properties and does not derive any revenues from operations. Operational activities have been funded through private placements. At December 31, 2014, the Company had working capital of \$4.0 million (December 31, 2013: \$4.3 million). In management's opinion, the Company's working capital is sufficient to cover the Company's budgeted exploration programs and short-term obligations to December 31, 2015.

The Company has no bank debt or banking credit facilities in place.

OFF-BALANCE SHEET ARRANGEMENTS

The Company does not have any off-balance sheet arrangements.

CONTRACTUAL OBLIGATIONS

The Company has the following contractual obligations relating to an office lease agreement:

2015	\$ 109,596
2016	\$ 27,399

As a result of the issuances of Flow-Through Shares on February 11, 2014 and December 22, 2014, the Company has a commitment to incur \$2,800,000 in qualifying Canadian exploration expenditures on or before December 31, 2015. As of December 31, 2014, \$1,600,000 of the commitment was remaining.

RELATED PARTY TRANSACTIONS

Key management compensation

Key management personnel at the Company are the directors and officers of the Company.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

RELATED PARTY TRANSACTIONS (continued)

Key management compensation (continued)

The remuneration of key management personnel during the following periods was as follows:

	Year ended December 31, 2014	Fifteen-month period ended December 31, 2013
	\$	\$
Short-term benefits	1 767,629	1,213,665
Share-based payments	2 280,087	621,823
Total	<hr/> <hr/> 1,047,716	<hr/> <hr/> 1,835,488

1 Short-term benefits consisted exclusively of salaries, bonuses, health benefits and consulting fees for key management personnel, some of which have been capitalized to exploration and evaluation assets.

2 Share-based payments were non-cash items that consisted of the fair value of stock options and warrants that had been granted to key management personnel, some of which have been capitalized to exploration and evaluation assets.

During the year ended December 31, 2014, the Company charged a company that has two Directors and two Officers in common \$30,000 (fifteen months ended December 31, 2013: \$Nil) for administration expenses including office rent and office operating costs, the amount of which was netted against office and administration expenses in the consolidated statement of loss and comprehensive loss.

During the year ended December 31, 2014, the Company was charged \$26,887 (fifteen months ended December 31, 2013: \$Nil) for Office Administrator services by a company that has two Directors and two Officers in common, the amount of which was included in professional fees in the consolidated statement of loss and comprehensive loss. At December 31, 2014, accounts payable and accrued liabilities included an amount of \$3,432 (December 31, 2013: \$Nil) for these services.

During the year ended December 31, 2014, the Company charged a company that has two Directors and two Officers in common \$14,700 (fifteen months ended December 31, 2013: \$Nil) for CFO services, the amount of which was netted against salaries and benefits in the consolidated statement of loss and comprehensive loss. At December 31, 2014, accounts receivable included an amount of \$1,764 (December 31, 2013: \$Nil) for these services.

FOURTH QUARTER

The Company recorded a net loss of \$399,101 for the quarter ended December 31, 2014. The net loss comprised of total expenses of \$396,449 and an adjustment to investments of \$12,520, partially offset by interest income of \$9,868. The most significant expenses consisted of salaries and benefits of \$161,711, including Board-approved management bonuses totaling \$37,143, investor relations costs of \$107,487 and share-based compensation expense of \$31,290.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

PROPOSED TRANSACTIONS

As of the date of this report, there were no proposed transactions.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

Significant assumptions about the future and other sources of estimation uncertainty that management has made that could result in a material adjustment to the carrying amounts of assets and liabilities in the event that actual results differ from assumptions made, relate to, but are not limited to, the following:

i) Critical accounting estimates

Critical accounting estimates are estimates and assumptions made by management that may result in a material adjustment to the carrying amounts of assets and liabilities within the next financial year and include, but are not limited to, the following:

Share-based payments

The fair value of share-based payments is subject to the limitations of the Black-Scholes option pricing model that incorporates market data and involves uncertainty in estimates used by management in the assumptions. Because the Black-Scholes option pricing model requires the input of highly subjective assumptions, including the volatility of share prices, changes in subjective input assumptions can materially affect the fair value estimate.

Recovery of deferred tax assets

The Company estimates the expected manner and timing of the realization or settlement of the carrying value of its assets and liabilities and applies the tax rates that are enacted or substantively enacted on the estimated dates of realization or settlement.

ii) Critical accounting judgments

Information about critical judgments in applying accounting policies that have the most significant effect on the amounts recognized in the consolidated financial statements include, but are not limited to, the following:

Impairment

The assessment of any impairment of plant and equipment and exploration and evaluation assets is dependent upon estimates of recoverable amounts that take into account factors such as reserves, economic and market conditions and the useful lives of assets. Judgment is required in assessing the appropriate level of cash generating units to be tested for such impairment.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

CRITICAL ACCOUNTING POLICIES AND ESTIMATES (continued)

Decommissioning liabilities

In the event that decommissioning liabilities are required to be recognized, such liabilities would be stated at the fair value of estimated future costs. Such estimates require extensive judgment about the nature, cost and timing of the work to be completed, and may change with future changes to costs, environmental laws and regulations and remediation practices.

A detailed summary of all of the Company's significant accounting policies is included in Note 3 to the consolidated financial statements for the year ended December 31, 2014.

FINANCIAL INSTRUMENTS

The Company's financial instruments are exposed to certain financial risks which are discussed in detail in Note 12 of the Company's December 31, 2014 consolidated financial statements.

OTHER MD&A REQUIREMENTS

ADDITIONAL DISCLOSURE FOR VENTURE ISSUERS WITHOUT SIGNIFICANT REVENUE

General and administration expenses were as follows:

	Year ended December 31, 2014	Fifteen months ended December 31, 2013
	\$	\$
Amortization	130,270	209,312
Investor relations	223,022	206,656
Office and administration	195,145	308,957
Professional fees	110,462	102,409
Salaries and benefits	565,443	928,927
Share-based payments expense	232,998	547,775
Transfer agent, regulatory and filing fees	46,591	32,459
Travel and accomodation	20,072	23,730
	<hr/>	<hr/>
	1,524,003	2,360,225

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

DISCLOSURE OF OUTSTANDING SHARE DATA

The Company is authorized to issue an unlimited number of common shares without par value.

As at the date of this report, there were 90,773,922 common shares issued and outstanding.

As at the date of this report, there were 8,025,000 stock options and 5,037,500 share purchase warrants outstanding.

RISKS AND UNCERTAINTIES

The principal risk faced in the advanced exploration stage is the ability to raise the funds required to further assess the viability of a mineral deposit. This phase requires high expenditures to determine if a deposit may be profitable to mine. The Company does not operate any producing properties and as such, is dependent on the ability to raise funds. Although the Company believes it has sufficient access to financial markets to support its intended work plan, failure to do so would result in future work being suspended.

As of the date of this report, the Company believes it has sufficient funds on hand to meet its financial obligations to December 31, 2015. Financial assets and liabilities consist of cash and cash equivalents, accounts receivable, investments and accounts payable and accrued liabilities. It is management's opinion that the Company is not exposed to significant interest or credit risks arising from these financial assets and liabilities.

The Company's activities involve the application for permits from Provincial authorities and such activities are governed by various laws and regulations that cover the protection of the environment, land use, exploration, development, co-ordination of operations and infrastructure with third parties engaged in other activities on the lands, taxes, labour standards, occupational health, waste disposal, safety and other matters. Environmental legislation in Canada provides restrictions and prohibitions on spills and various substances produced in association with certain exploration activities which would result in environmental pollution. A breach of such legislation may result in imposition of fines and penalties. In addition, certain types of activities require the submission and approval of environmental impact statements. Environmental legislation is evolving in a direction of higher standards and enforcement, and higher fines and penalties for non-compliance. Environmental assessments of proposed projects carry a heightened degree of responsibility for companies and directors, officers and employees. The cost of compliance with changes in governmental regulations has the potential to reduce the profitability of future operations.

The Company believes that it is in compliance with all material laws and regulations which currently apply to its activities. There can be no absolute assurance, however, that all permits which the Company may require for exploration activities and land use will be obtainable on reasonable terms or on a timely basis, or that such laws and regulations will not have an adverse effect on any exploration projects that the Company may undertake.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED DECEMBER 31, 2014

RISKS AND UNCERTAINTIES (continued)

Mineral exploration involves many risks, which even a combination of experience, knowledge and careful evaluation may not be able to overcome. Operations within the Company will be subject to all the hazards and risks normally incidental to exploration, development and production of minerals, any of which could result in work stoppages, damage to property, and possible environmental damage. Unusual or unexpected formations, formation pressures, fires, power outages, labour disruption, impaired access to site, legal or regulatory changes, flooding, explosions, cave-ins, landslides, weather conditions and the inability to obtain suitable or adequate machinery, equipment or labour are other risks involved in extraction operations and the conduct of exploration programs. The Company's exploration activities will be subject to the availability of third party contractors and equipment. There are also physical risks to the exploration personnel. If any of the Company's properties are found to have commercial quantities of mineralization, the Company could be subject to additional risks respecting any development and production activities.

All of the properties in which the Company has an interest are in the exploration stage and are currently without reserves. Development of these mineral properties will only follow upon obtaining satisfactory exploration results, receipt of positive engineering studies, access to adequate funding, community support and all necessary permits, licenses and approvals. Mineral exploration and development involves a high degree of risk and few properties which are explored are ultimately developed into producing mines. Substantial expenditures are required to establish reserves through drilling and to develop the mining and processing facilities and the infrastructure at any site chosen for mining. There is no assurance that these mineral exploration and development activities will result in any discoveries of commercial mineral deposits. The long-term profitability of the Company's operations will be in part directly related to the cost and success of its exploration programs, which may be affected by a number of factors beyond the Company's control.

Factors beyond the control of the Company may affect the market price of minerals produced and the marketability of any ore or minerals discovered at and extracted from the Company's properties. Metal prices are subject to significant fluctuation and are affected by numerous factors beyond the Company's control including international economic, financial and political events, global or regional supply and demand patterns and speculative activities. The effect of these factors on the Company's operations cannot accurately be predicted.
